

THINGZFIREWALL

An Ultimate IoT Network Guard

ThingzFirewall Lite is a smart home/office firewall that has been designed to protect all your internet connected devices present at home or SME.

The Multi-Layered cybersecurity mechanism has been incorporated for the protection of PCs, Mac Systems, iOS and Android smartphones, tablets, laptops, workstations, terminals and other smart devices such as wireless cameras, access control systems connected to the Internet. All these devices can be managed via a user friendly *ThingzFirewall Lite* App with little or no experience of network administration.
