- **Notification Management**

Admin can push notification and alerts to the user's device.

KEY BENEFITS

- Allow employees to bring their own mobile devices to the organization
- Central Mobile Policy Management
- Lost Device detection through periodic location tracking
- Over the Air deployment and removal of files and applications

Mobile Phone Security is among one of the top priorities for data critical organizations. To address this concern we have developed indigenous Android based solutions. We focus on security analysis, customization & enhancement of Android OS and Mobile Device Management to address privacy concerns of user as well as organization.

"We also provide SIP based VoIP services for the organizations who wants to have their own internet calling service with customized encryption."
